

Boids supplies local policy concepts; their cognitive consequences must be measured

Physical concept	Implemented guidance	Observed quantity / limitation
S · Separation	Avoid redundant construction when a useful neighbor exists	Breadth, duplication, sustained niches Guidance cannot enforce complementarity
A · Alignment	Reuse verified useful neighbor interfaces	Correct adoption + return interventions A passing tool need not be indispensable
C · Cohesion	Fit recurring service needs and recent neighbor capabilities	Common-panel coverage and persistence Shared demand is externally specified

Three rules are bundled in one prompt condition. No force equations, adaptive neighborhoods or individual-rule effects are identified.
