

LOCAL RULE		TRANSLATION TO TOOLS		READOUT / BOUNDARY
S Separation	➔	Avoid redundant construction when a useful neighbor capability exists	➔	Breadth, duplication, sustained niches A hint cannot enforce complementarity
A Alignment	➔	Reuse verified useful interfaces when available from a neighbor	➔	Correct adoption and functional witnesses A passing dependency can have substitutes
C Cohesion	➔	Fit recurring needs and capabilities using the same local pre-round view	➔	Common-panel coverage and persistence The shared demand is externally specified

Bundled prompt guidance: no physical steering equations, adaptive neighborhoods or separately identified rule effects.
